

Distribution & Tracking

ExpertPM Distribution & Tracking provides a fail-safe solution for managing patient records. Now you can locate and retrieve charts quickly to keep your business operating at peak efficiency for tasks such as appointments, prescriptions, medical inquiries, and correspondence.

Chart Tracking

With Experior's chart tracking, lost charts and films are virtually eliminated. Distribution & Tracking electronically records each movement of the patient's medical record chart, logging up to 15 chart movements on a single screen.

Screens display information on the date, time, operator, and current location of the chart, and allows staff to access the exact chart location instantly.

Distribution & Tracking greatly enhances the productivity and efficiency of the Medical Records file room. It improves quality assurance and patient care by ensuring the chart is readily available at any time.

Highlights Include:

- Lost charts are virtually eliminated
- Capability of logging 15 chart movements on a single screen
- Optional bar coding labels and scanners
- Date, time (seconds and milliseconds) of transfer, and operator displayed
- Chart reservations

Trusted Experience. Innovative Solutions. Unparalleled Service.

Multiple Patients Charts

Because multiple facilities have become so common in health care, today's physicians often need to manage multiple charts for their patients at numerous locations.

The Multiple Patient Chart module identifies and tracks multiple chart records for each patient. To begin, simply designate the patient's home medical chart to indicate which location serves the majority of patient visits. If the patient visits multiple locations, each location can then create and add its own chart number to the patient's central record.

A patient can have the same medical record number with different home locations and multiple volumes, or multiple chart numbers with different home locations and multiple volume numbers. The Multiple Patient Chart module allows each healthcare center to determine its own chart numbering scheme for maximum flexibility.

Highlights Include:

- Multiple charts, locations, and volumes per patient
- Integrates with Distribution & Tracking
